MISSION TO BENIN :

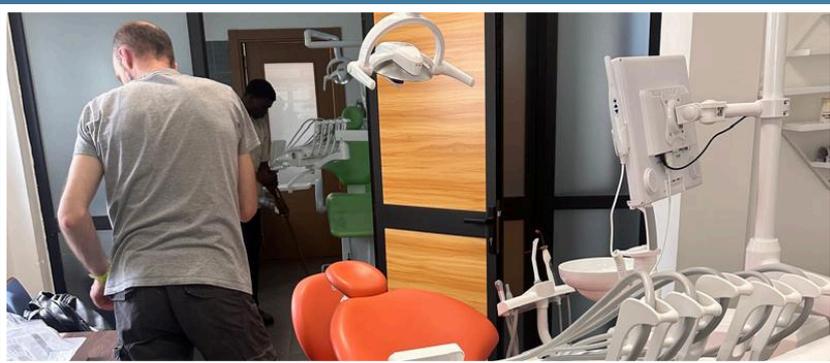

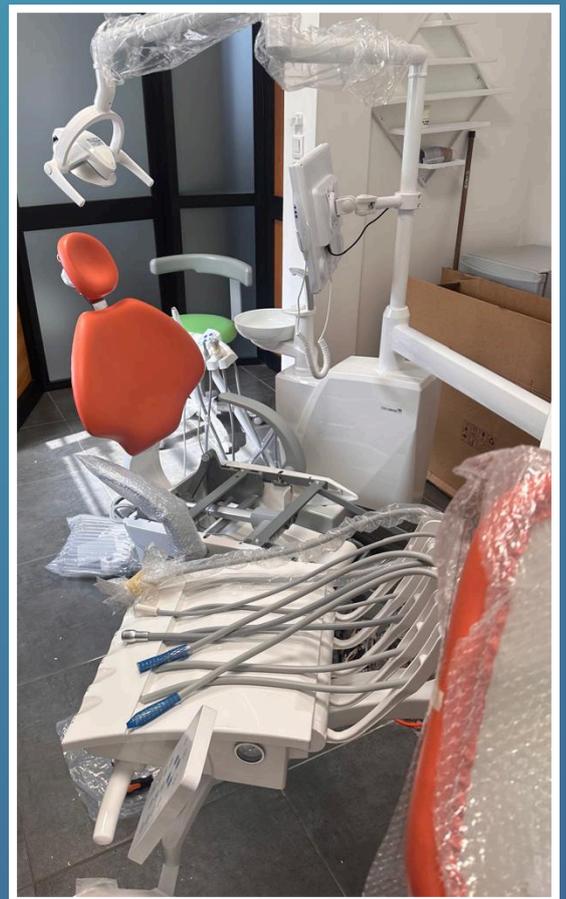

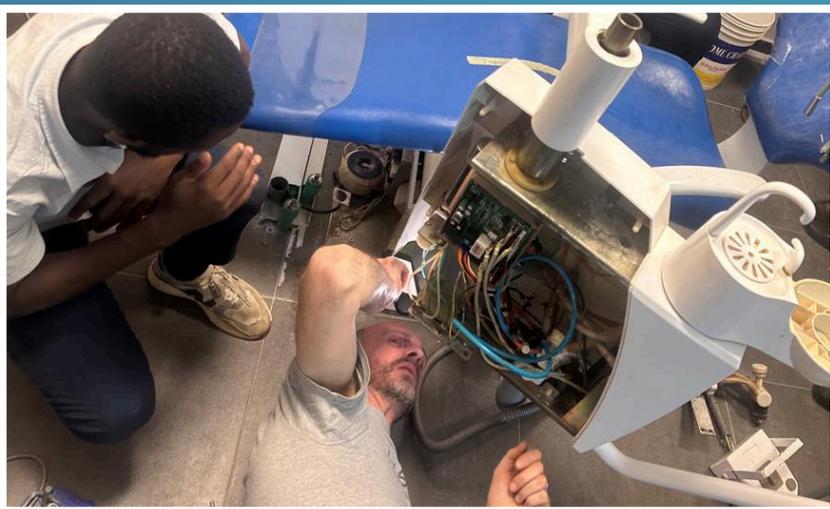

INSTALLATION OF DENTAL
EQUIPMENT AND TRAINING OF
TECHNICIANS

23/02/2026-27/02/2026

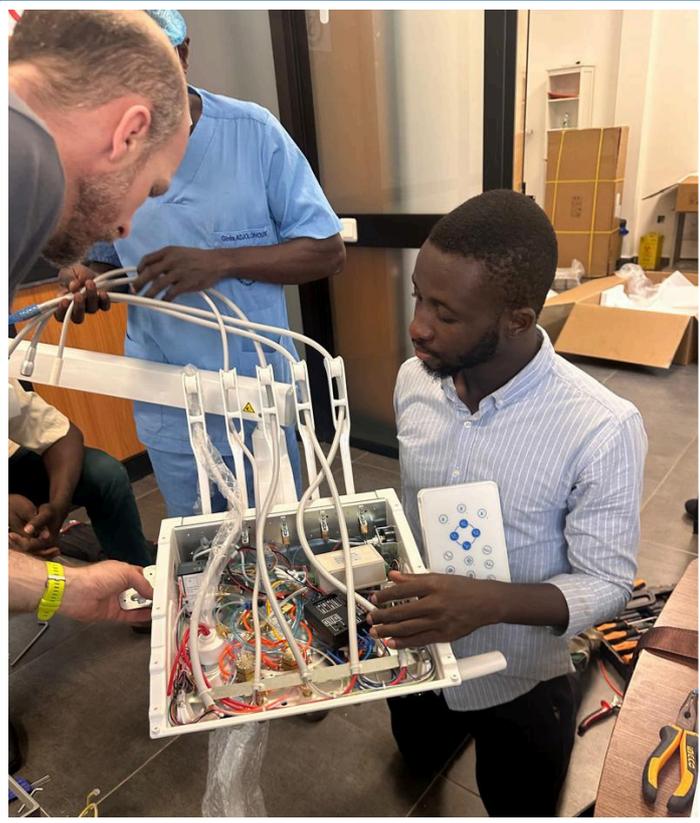

Benin, a West African country with a population of around 14 million, is experiencing gradual development of its healthcare system, particularly in the dental sector. Despite this progress, access to oral and dental care remains limited. It is estimated that there are only around one hundred dentists in the country, which represents roughly one dentist for more than 140,000 inhabitants. This situation highlights the challenges related to the development and modernization of dental infrastructure, as well as the importance of equipping dental clinics with high-performance equipment.

In this context, our technician Clément traveled to Cotonou, the economic capital of the country, to carry out a technical intervention at the dental clinic of Dr. Micheline KOTI ADEOTI. During this mission, he installed two E-LINE 100 dental chairs and relocated an existing chair in order to set up a room dedicated to dental impressions and to optimize the organization of the clinic.

This trip was also an opportunity to share our technical expertise. Clément therefore trained two technicians from the company Geclib in best practices for the installation, adjustment, and maintenance of dental equipment, in order to strengthen local skills and ensure efficient technical support on site.

Finally, taking advantage of his presence in Benin, Clément also visited several partner dentists with whom we regularly collaborate: Dr. Marc Aurèle CATRAYE, Dr. David DJOSSOU, Dr. Makiath BOURAIMA, and Dr. Corinne LALEYE. These meetings help maintain close relationships with our partners and allow us to better understand the needs on the ground in order to continue offering solutions adapted to practitioners in the region.
