

## TECHNICAL MONITORING & MAINTENANCE TRAINING IN CAPE VERDE

In September 2024, Clement EUDIER, technical manager of **MAECOLUX S.A.** conducted a technical monitoring mission on a dozen dental practices delivered to the Cape Verdean Ministry of Health by **MAECOLUX S.A.** through their partner FSE Belgium in 2019. He also performed a training on maintenance of local MOH technicians.

In order to ensure the continuous functioning of all the provided equipment in the long term and thus promote dental care on the islands of Cape Verde, Clement EUDIER visited most of the dental practices supplied to the Ministry of Health by [MAECOLUX S.A.](#) in 2019.

Clement raised the local care staff and technician's awareness on issues such as pre-emptive maintenance, regular cleaning and appropriate use of the dental equipment. He assisted local technicians to demonstrate the correct procedures for sustainably maintaining the dental equipment of the MOH.

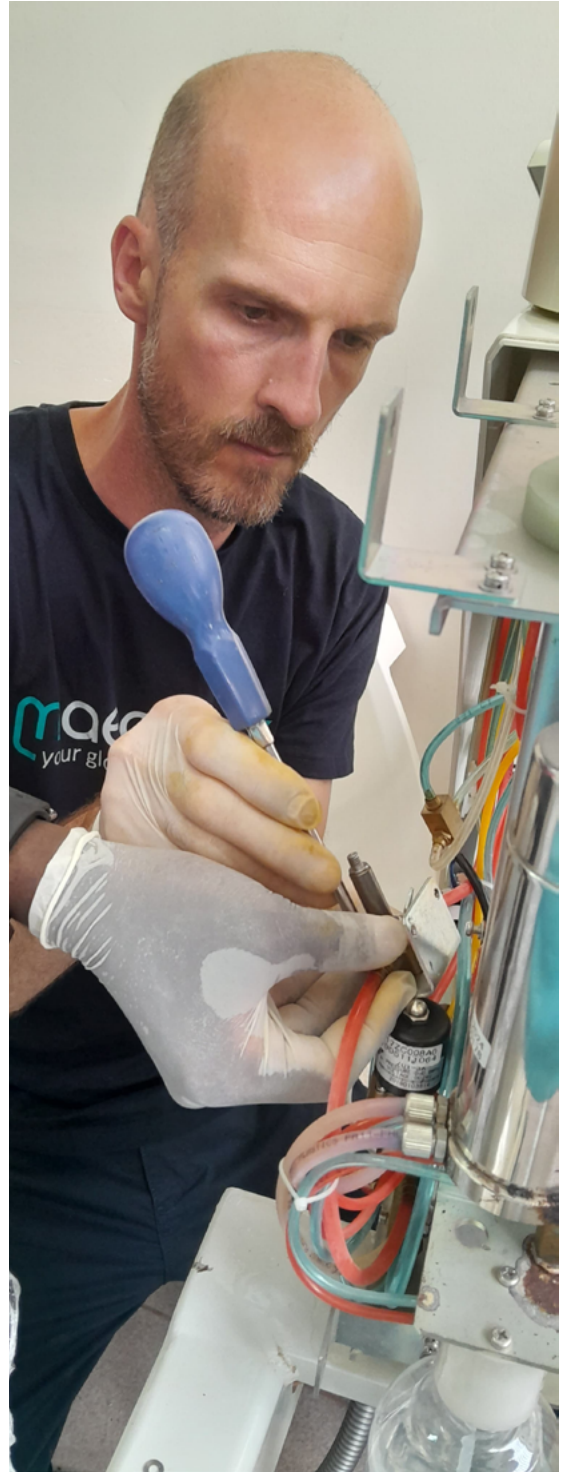

Thanks to the outstanding work and the coordination lead by Edilton SPENCER (FSE's local partner in Cape Verde) this mission concluded by Clement EUDIER on behalf of [MAECOLUX S.A.](#) has successfully improved ongoing access to dental care in Cape Verde. The provided high quality equipment will allow Cape Verdean dentists to perform their profession for many years.
